

FERTIOLIVE

**Nitrogen(NH₂) : 11%, Carbohydrate : 15%
seaweed extract Cytokinin ; Auxine. AG**

Fertilizer

Foliar fertilizer control the problem of seasoning (case of olive trees)

1) PRINCIPAL OF USE :

Ferti-Olive is a foliar fertilizer based on mono nitrogen. It is used mainly on olive, citrus, almond and pistachio trees to promote flowering, fruit set and seasoning problem (Alternance) especially when it is applied during the high yield years. However, it can be used on other cultures (apple, pears, melons, cucumber, strawberry, tomato, pepper)

2) GUIDELINES :

Ferti-olive is used mainly on olive, almond, citrus et pistachios: 400-500 ml / 100 L in March, June and July. However it can be used on other cultures : apple, pears, melons, cucumber, strawberry, tomato and pepper : 200 à 300 ml / 100L of water .

3) GENERAL ADVICE :

- Apply **Ferti-Olive** early in the morning or late at night. Avoid periods of extreme heat
- Use a sufficient amount of water to wet the leaf surface.
- For more efficiency, it is advisable to have a solution pH of 5 to 7.

4) COMPATIBILITY :

Ferti-Olive can be mixed with most fertilizers and pesticides however it is advisable to do an accounting test .

5) STORAGE :

Avoid direct solar radiation and excessive moisture
Keep the product out of the reach of children.
