

NITRATE MOBILE

BORON(B) : 9% (P/P) ; 11,5% (P/V)
Molybdène (Mo) : 0,005% (P/P) ; 0,0065% (P/V)

Fertilizer

BORON FOLIAR FERTILIZER

**Improve flowering and fruit set,
controls the harmful effect of nitrates.**

1) PRINCIPAL OF USE :

Nitrate Mobile is a product used by foliar way to bring the needs in boron and allowing the transfer of carbohydrates from the leaves to the storage organs (fruits, tubers, seeds and wood).

2) GUIDELINES :

It is used in arboriculture, olive, vine, citrus, vegetables crops, greenhouse cultures.

3) DOSES AND STAGES OF APPLICATION :

- **Arboriculture** (apple tree, pear, peach, olivier, almond...):
2-3 l/ha/application: flower bud - fruit set (fall of the petals) - magnification - after harvest
 - **Vine** (Table and cuve) : 3l/ha /application : flower bud - early fruit set - after harvest
 - **Vegetable crops** : 2 l/ha/application : flower bud / fruit set of each bouquet
 - **Potato / sugarbeet** : 3l/ha/application : early tuberization - every 10 days at harvest
 - **Sunflower** : 2 l/ha/application : capitulum formation - 10 days later
- for more efficiency it is advisable to mix Nitrate mobile with STIMPLEX for flower bud and fruit set applications and with FERTIK for growing and post-harvest applications (Protein transfert).*

4) GENERAL ADVICE:

- Do not exceed 2.5 to 3 L / ha for each application.
- Shake the product well before use.
- Make the treatment early in the morning or late at night to avoid the period of hot weather.

5) COMPATIBILITY :

It is advisable to use it alone especially when it is mixed with Ferti-k. In case of obligation to make a compatibility test before mixing

6) STORAGE :

- Avoid direct solar radiation and excessive moisture
- Keep the product out of the reach of children.
