

Multi-N Protein Booster

For High Performance Cropping

Multi-N is a specific high-nitrogen fertilizer with sulfur in the form of thiosulfate. This combination of synergy: NITROGEN / SULFUR allow the increase of the metabolism, the better nutritive absorption and consequently the increase of the yields. Multi-N also makes it possible to increase the protein content of the seeds and the specific weight (cereals).

Multi-N Protein Booster

For High Performance Cropping

Multi-N Contains		w/w	w/v	g/L
AZOTE (N)	AB Ammonical N	12.6%	16.5%	165g
	As Ureic Nitrogen	12.6%	16.5%	165g
Total Nitrogen	(N)	25.2%	33.0%	330g
SOUFRE	As Sulphur t rioxide (SO ₃)	19.2%	25.0%	250g
	As elemental Sulphur (S)	7.7%	10.0%	100g

Guidelines:

- Multi-N is used specifically for cereals. However, it is used for cruciferous vegetables, market gardening, Arboriculture...
- Multi-N is applied foliarly, in fertigation and by sprinkling.
In Foliar applications, the sprayer should be clean and discounted of any residues. Start by shaking and add Multi-N gently. Maintain agitation until

Dosage and stages of application:

1) Cereals:

- Foliage: 3 - 5 l / ha (in 300 - 400 l of water), early tillering, full tillering and beginning of heading.
- Drip or Aspersión: 20 l / ha (early tillering, full tillering, heading).

2) Market gardening:

- 20 to 30 l / ha in fertigation at the beginning of growth and early fruit set
- 300 to 500 ml / 100 l of water foliarly

3) Arboriculture, Citrus and Vine:

- 30 l / ha in fertigation (beginning of the cycle, early fruiting, after harvest)
- 500 cc per 100 liters of foliar water

4) Colza:

- 3 l / ha: Run stage

Compatibility:

Multi-N is physically and chemically compatible with the majority of insecticides, fungicides and herbicides (with the exception of Esters). However, compatibility tests can be performed before use to ensure biological compatibility.
